

Decorative Concrete Selection Guide

Perth Metro | 2022-23

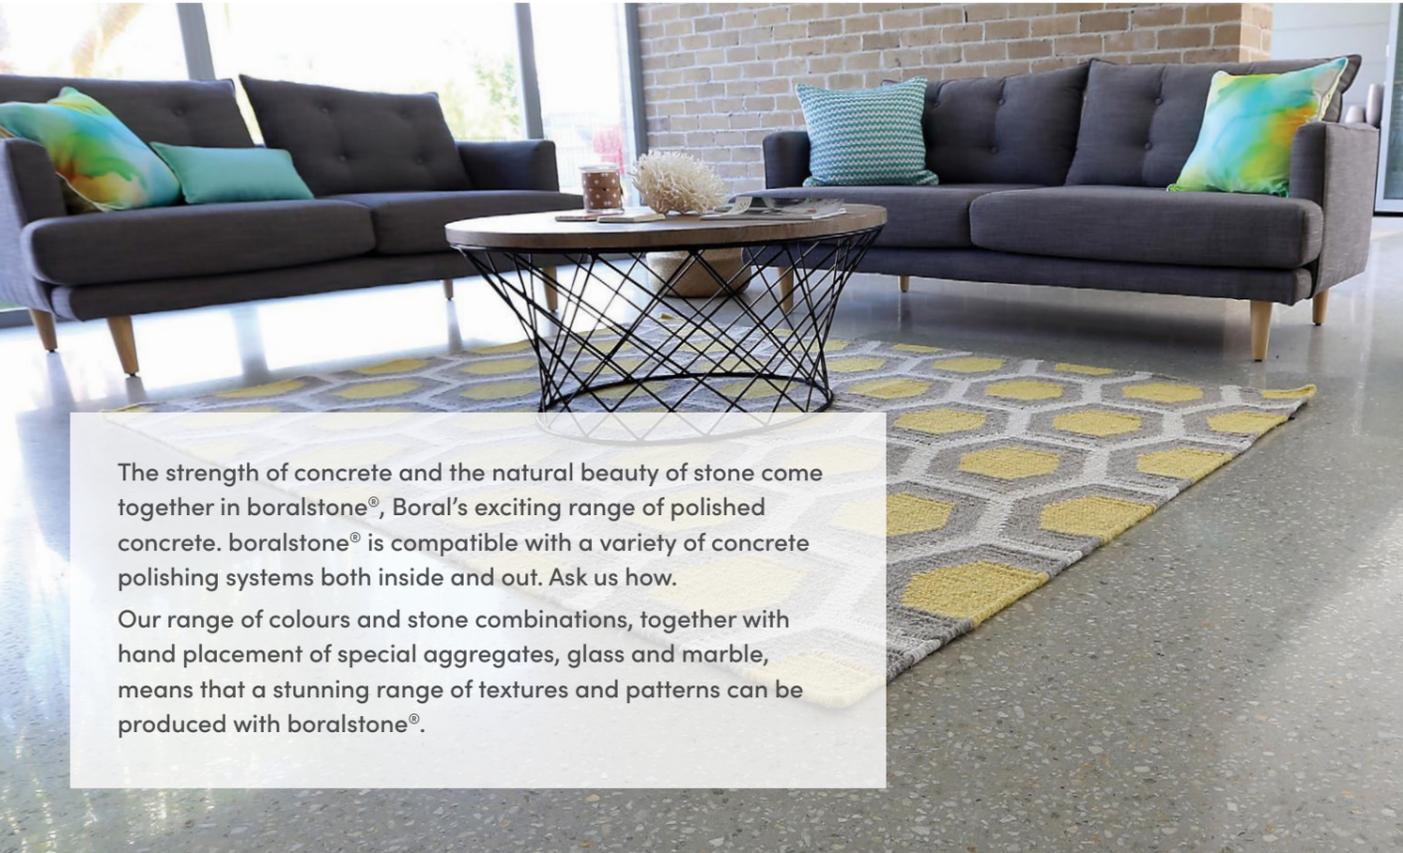

boralstone® **exposé**® **colori**® **luminesque**®

Boral's innovative decorative concrete range is crafted from locally sourced natural stone and designer pigments, to bring the true beauty of Western Australia to your indoor and outdoor areas.

BORALSTONE® – POLISHED AND HONED	3
COLORI® COLOURED CONCRETE	5
EXPOSE® – EXPOSED AGGREGATE CONCRETE	9
LUMINESQUE®	11
INFORMATION AND FINISHING	13

The strength of concrete and the natural beauty of stone come together in boralstone®, Boral's exciting range of polished concrete. boralstone® is compatible with a variety of concrete polishing systems both inside and out. Ask us how.

Our range of colours and stone combinations, together with hand placement of special aggregates, glass and marble, means that a stunning range of textures and patterns can be produced with boralstone®.

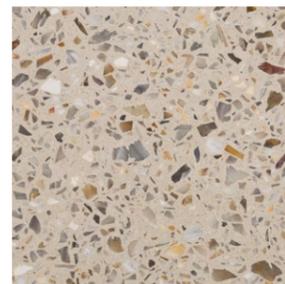

Coogee

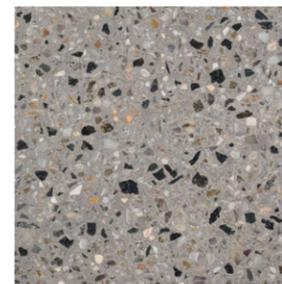

Southern Cross

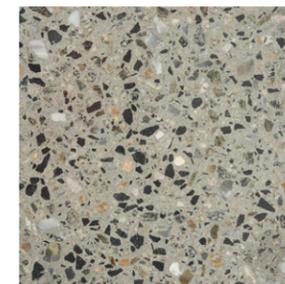

Yanchep

Lucky Bay

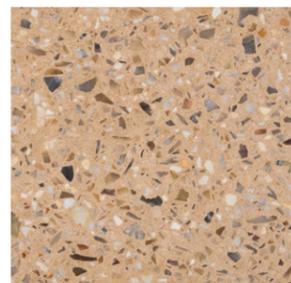

Cottlesloe

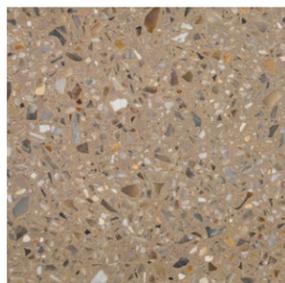

Rottnest

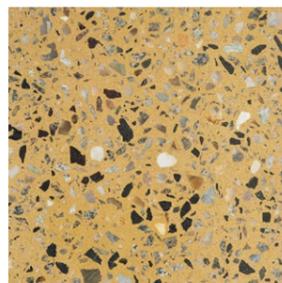

Industrial Grey

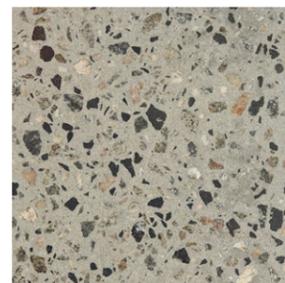

Dunsborough

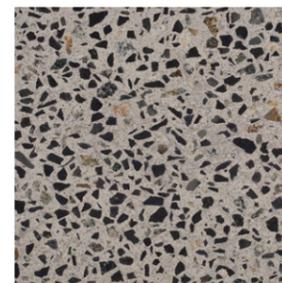

Brighton

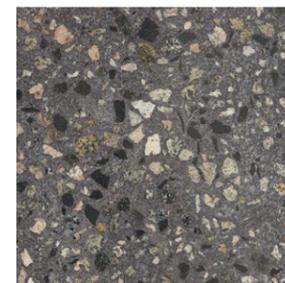

Lancelin

Jurien

Preston Beach

Shark Bay

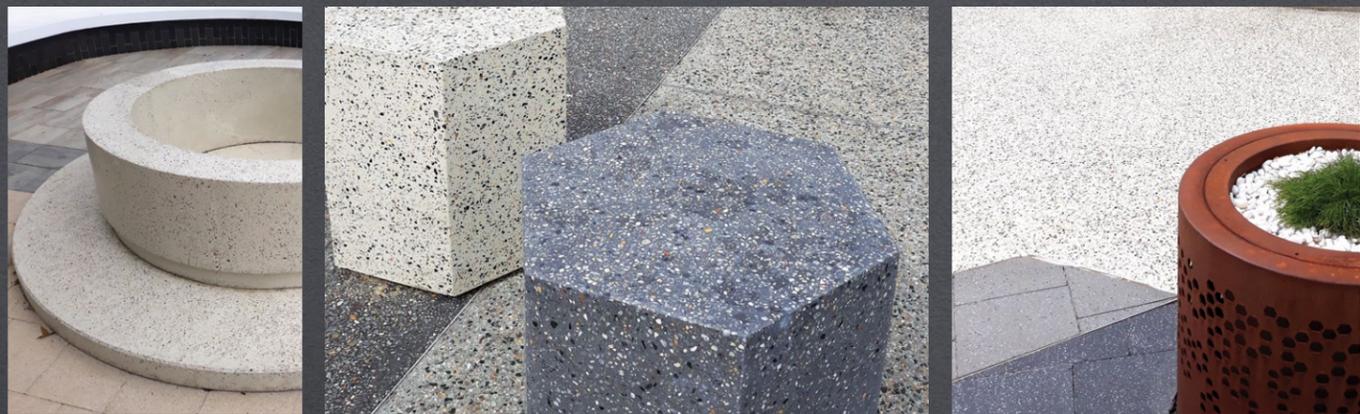

Leighton

Be inspired by our colori® coloured concrete shades. Rich oxides permeate the full mix for long-lasting effects.

Take it to the next level by adding textures, patterns and shapes.

The colori® range includes a choice of coloured concrete options which then incorporate various textures, lines, patterns, shapes and other effects into the concrete surface to create an innovative finish. colori® concrete oxides colour the full depth of the entire mix not just the surface to provide a rich colour.

The inspiring and expressive tones introduced through Boral's colori® range allow you to find a new freedom through colours. Now the once functional areas become features of expression, areas of entertainment, and elements of design.

exposé®

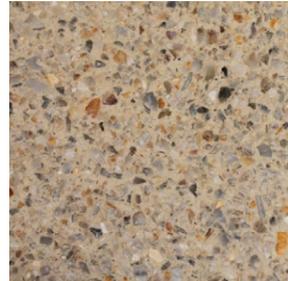

Exposed aggregate concrete

Transform your outdoor area with the unique character of exposé® – an aggregate texture, ideal for paths and driveways requiring more grip.

Exposed aggregate concrete

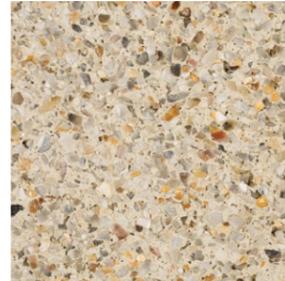

Lucky Bay

Dunsborough

Lancelin

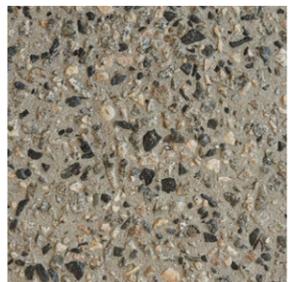

Argyle

Brighton

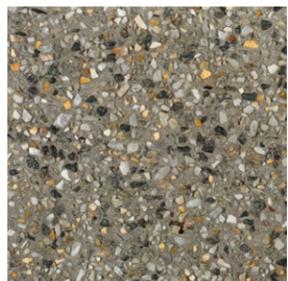

Rottneest

Jurien

Ocean Reef

Cottesloe

Shark Bay

Collie

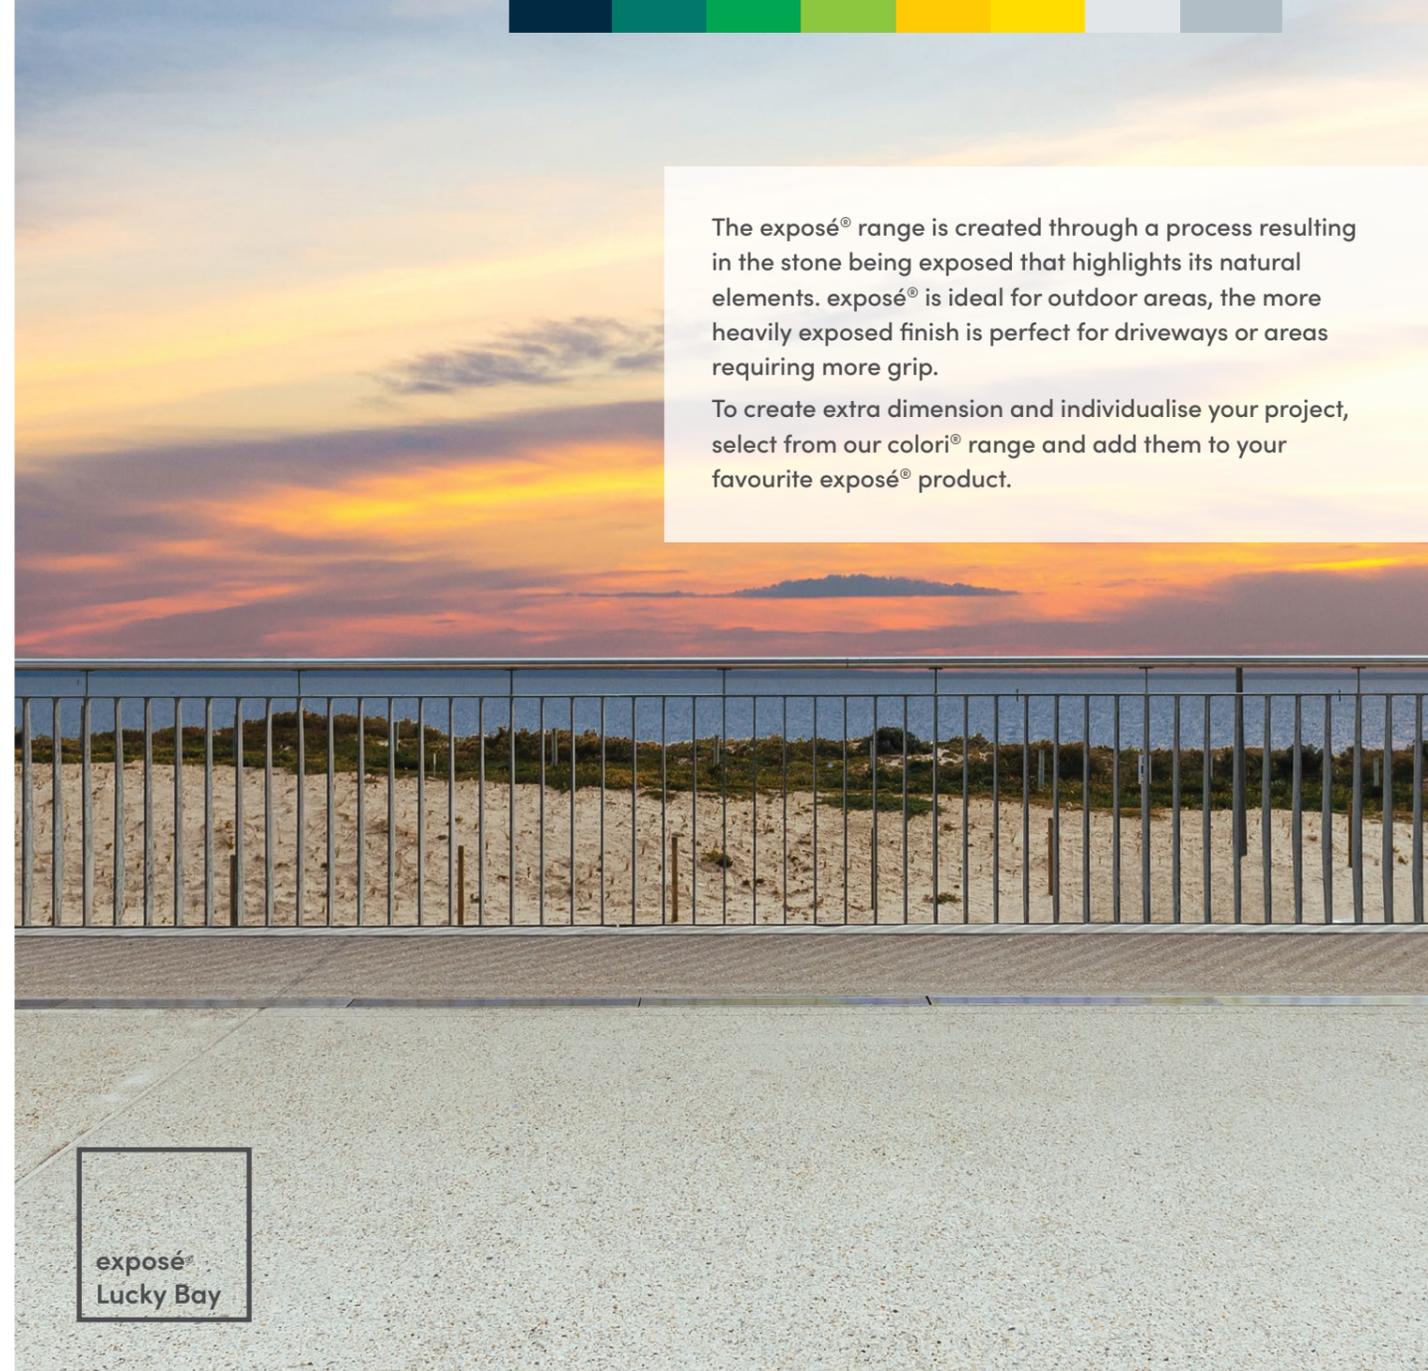

Sorrento

Preston Beach

Leighton

The exposé® range is created through a process resulting in the stone being exposed that highlights its natural elements. exposé® is ideal for outdoor areas, the more heavily exposed finish is perfect for driveways or areas requiring more grip.

To create extra dimension and individualise your project, select from our colori® range and add them to your favourite exposé® product.

Professional finishing options

Ask an experienced decorative concreter to help you achieve these finishes

boralstone®

Polished Concrete

A smooth, flat finish used for internal areas, revealing the decorative aggregates in either a full depth, medium or partial exposure. Polished concrete can be sealed, similar to timber floor boards or highly polished like stone or terrazzo.

Burnished Concrete

A smooth, flat finish used for internal areas where there is no exposure of aggregates; fines in the concrete may be exposed, resulting in a lightly speckled appearance.

Honed Concrete

Recommended for external areas allowing the flow through of your polished concrete internally to honed concrete externally. Honed concrete is ground to a coarse cut allowing for slip resistance requirements for external elements. Honed concrete brings to life driveways, patio areas and pool surrounds.

colori®

Broom, Coving Trowel, Sponge & Inprints

Innovative and economical method to create various textures, lines, patterns, shapes and other effects into the concrete surface.

Sand Blasting

Removing the top layer of concrete to create a rough or sandy look or to expose stones in sections and patterns. Please note that the colori® range does not include decorative aggregates.

Saw Cuts and Grooves

Create tiled effects, lines and shapes using a saw or hand tool.

Surface Seeding

Adding small amounts of stones, pebbles, rock salts, etc. into the surface by hand before the concrete sets. Rock salt dissolves when washed to create indents.

exposé®

Light Exposure

Taking 1–2mm off the surface after placing reveals less stone. Great for footpaths or outdoor areas.

Heavy Exposure

Taking 3–5mm off the surface after placing reveals more stone for a more coarse surface. Great for driveways or areas requiring more grip.

Please note that overexposure may cause stones to separate from the surface.

Speak to a Boral representative regarding options in making your decorative concrete – lower carbon concrete.

Concrete shown is Exposé Envirocrete Cottlesloe (LCC) at our Canning Vale display Centre (See back page for address)

luminesque®

Glow-in-the-dark Concrete

luminesque® is Boral's concrete aggregate application that produces a bright glow-in-the-dark – illuminating polished concrete floors, pool surrounds, garden pathways, outdoor areas and driveways.

The addition of brilliant luminescent aggregate technology radiates light in the dark for hours after daylight sun exposure. luminesque® can now be used in exposé and boralstone®.

Important information

PLEASE READ BEFORE YOU ORDER

PLAN AHEAD – Decorative Concrete uses speciality ingredients. Please notify us of your total job requirements and allow a minimum of two working days notice from the date the order is placed with Boral. Check weather forecasts in advance, it is vital to the quality of the concrete that it is not exposed to rain, hail, wind, debris or very hot or humid conditions during the placing/setting process.

USE A PROFESSIONAL – Decorative concrete products require greater attention and/or measures when placing and finishing beyond that of regular concrete. Please consult an experienced decorative concreter about the specific requirements of your project. Ask to see their portfolio of past projects.

DOUBLE CHECK – When your selected mix is delivered to site and before it is placed, we advise you confirm that the description and product are what you have ordered. Carefully read the information on the delivery docket. As a double measure, ask the delivery driver to wash off a sample for your inspection. Be sure to wear protective clothing and glasses when handling concrete.

PUMPING – Decorative Concrete products are available in “pump” mixes. These mixes contain less stone and more sand than the regular mixes pictured, please consider the effect this will have on your project prior to ordering the mix. May not suit all pump designs or applications.

NO ADDITIONAL WATER – Your concrete will be designed for a specific water ratio or “slump” as prescribed on the delivery docket. Adding water beyond the prescribed slump may make it easier to work with, however it will also cause a loss of strength and lead to cracking, bleeding and/or dusting issues. The addition of water will create colour variations to your finished product.

PROTECTION – Always use quality concrete sealing, finishing or exposing agents. Sealing your project will improve the appearance, protect against weathering and extend the life of your concrete.

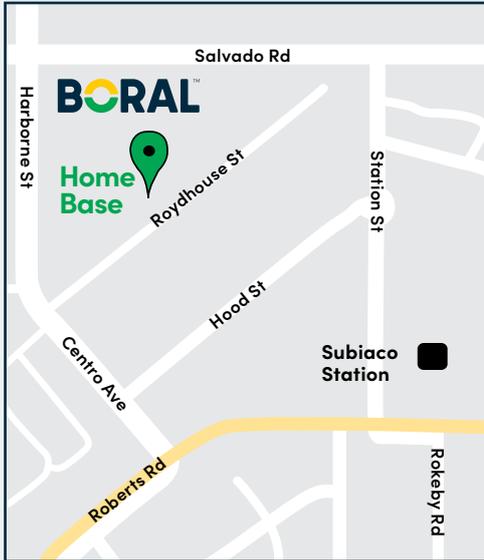

CONCRETE BURNS – Cement-based products such as concrete have corrosive properties that may be harmful to the skin or eyes. Please wear appropriate Personal Protective Equipment at all times when handling cement products.

ENVIRONMENT – Cement based products such as concrete can cause lasting damage to the surrounding environment if not properly controlled. Please ensure you or your concreter contain all concrete material and properly disposes of the waste. Consult your local council for more information or advice.

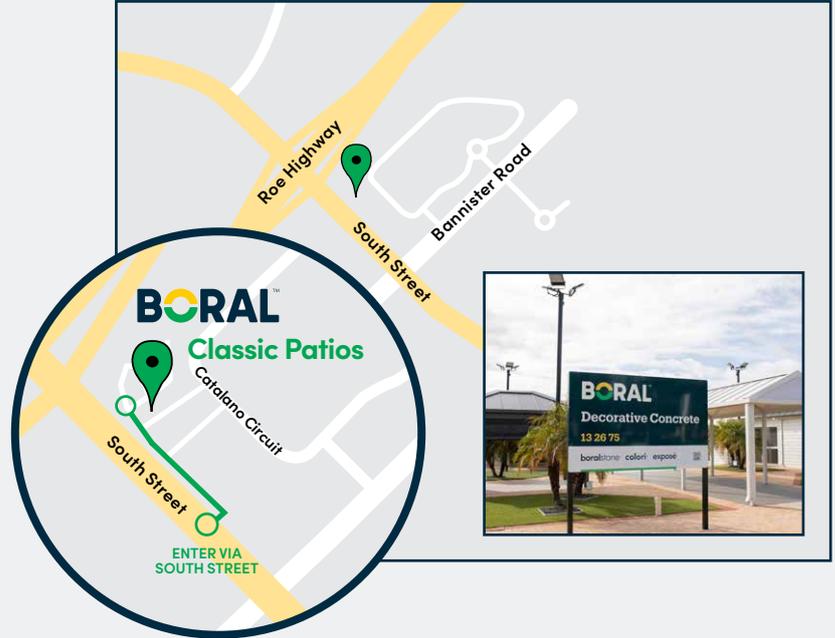

NATURAL PRODUCTS CAN VARY – Boral Decorative Concrete contains aggregates and other materials that originate from natural quarry products therefore some variation in appearance and consistency may occur. We recommend making final colour selections from an actual sample. The illustrations and/or samples pictured are intended as a guide only and not an exact representation of the finished product. Material may contain traces of iron found in quarries that could stain the concrete.

Visit us

**Boral Concrete – Home Base,
55 Salvado Road, Subiaco, WA**

**Boral Concrete – Classic Patios,
5 South St, Canning Vale, WA**

We highly recommend visiting one of our display centres to see our concrete products before purchase
